Answer to the information offer

to

Mr/ Goebel

«Ingenieur- und Architekturburo Goebel»  
(Germany)

We wish you health with your permission and we give for you gratitude on carrying out collaborations between us.

The Federal state unitary enterprise "Natsional operator for radioaktiv management" (Federal State Unitary Enterprise NO RJSC) is the representative from an order of the Rosatom State corporation that has given us the message that the Federal state unitary enterprise " Natsional operator for radioaktiv menegement " (Federal State Unitary Enterprise NO RJSC) has interest in cooperation with your enterprise "Ingenieur-und Architekturburo Goebel" (Germany).

We are regret because we have many reasons about not consideration of a possibility of a construction of points of burial of radioactive waste in deposits of rock salt of you at the moment.

The main thing is that deposits from salts lie at depths more than 100 meters. The Nuclear waste of 1 and 2 classes has burial in salt deposits in the Russian Federation now isn't profitable ( we have no money for such program at the moment) and ..../or the nuclear waste which will be long time is stored aren't safe. – We have no confirmation of their safety in ecology on burial of this geology for nuclear waste yet.

The Nuclear waste of 3 and 4 classes which have no burial at such depth under the Legislative Resolution of the government of the Russian Federation from 2/19/2012 No. 1069 "The main criterion is solid, liquid and gaseous waste to radioactive waste, criteria of reference of radioactive waste to special radioactive

waste and the deleted radioactive waste and criteria of classification of the deleted radioactive waste" therefore the Nuclear waste of 3 and 4 classes has to point from superficial burial at a depth up to 100 meters

If there is an interest in construction of constructions on storage of nuclear waste in deep salts of Federal state unitary enterprise « National operator for radioaktiv management » has the obligatory address to "Ingenieur-und Architekturburo Goebel" (Germany).

We wish you health and you have wellbeing once again.

Best regards

Yu.D. Polyakov
