Dear Chris Parker, Dear Matt Waples,

Hello Liz Muller Ex-German, hello Rob Balzer,

Thank you for the ego show on Economics of DBD

You are absolute beginners ! - And that is good.

Start filling GDF containers, drill and store away ...

I send you US rocksalt map - that is your geology.

Drill fields - Drill nets - its a mass drilling job project

attached you find some comments on your ego show

Here we calculate 10 Mio. EUR per 2.250 m Rotary drill

by storing 5.227 kg in one borehole - 1.913 EUR / kg

Our best mine plan DBHD does it for 800 EUR / kg

The mine plan government like 1.842 EUR / kg

DBD has no price advantages - BUT - with a mine GDF

you start storing in 20 years - with DBD you BEGIN to store away within 1 year having 3 holes filled already.

I never again join your ego show - make a Zoom Conf.

you are not important heros - you are GDF kids

I attach you the casing drilling table for a good DBD

You have an empty, unshielded much to big bomb

I send you ELB in PTH for that you can buy GDF

container licenses - as far as i can see - you have

no technology at all - you are fake it until you make

it US posers - but with a strong will !? - Or will you

run out of poser money before filling a first container ?

From the first filled DBD borehole on you will be
take seriously - until then you stand in a row that
started 1970 at Sandia Lab.

Best regards from Hagen Germany EU to ? USA
